

VERTI-SEED

804/1204

The Verti-Seed's unique action first opens the turf using special oval shaped discs followed by small chisels. The seed is then fed through the seeding funnel and released just above the slit where the wind cannot blow it away. The seed is deposited in the furrow accurately and can be precisely adjusted to give you exact rates even for very fine seed, like bents and fescues. The furrow is then sealed by the seeding shoe. Each seeding element is independently sprung, enabling the Verti-Seed to accurately seed on any ground contour.

VERTI-SEED 804/1204

- Metal tubes feed seed funnels before releasing seeds into slits
- The adjustable rear storage stand ensures the correct height for easy 3-point hitch connection

FEATURES / BENEFITS

FEATURE	BENEFIT
Close 1 ¹ / ₁₆ " (40mm) spacing between drills	Less passes for same density
Floating seeding elements	Rows grow in quicker and lines less visible
Fits compact tractor's 3-point linkage	Ideal for fine turf areas
Each seed planted individually	Seed is planted in the ground and not affected by wind
High germination	Save on wasted seed
Heavy construction	Penetrates even the hardest ground. Machine can be used for longer periods. Increased germination
No damage to turf	Reseed during playing season
Metered feed	Controlled application, less waste
Low maintenance	Saving time
